Can agrivoltaic projects benefit farmers?

Agrivoltaic projects can benefit farmers by giving them a second crop: electric power. Or, farmers can pick up some extra cash by leasing their land to power companies that will install their own solar panels on the site. Although the idea behind agrivoltaics has been around for decades, interest among farmers has picked up only recently.

Can solar panels be used on farms?

Installing solar panels on farms helps solve another major problem: finding the space to collect enough sunlight to produce a bounty of electricity. Farmers can help by sharing their land, says Jordan Macknick. An environmental scientist, he works at the National Renewable Energy Laboratory, or NREL. It's in Golden, Colo.

Should agrivoltaic planners put solar over a farm?

Or farm first, and put solar over it?" If farming is the main priority, she says, then the solar panels may need to be spaced farther apart and possibly be raised higher. Such changes could potentially limit how much electricity those farm fields generate. And agrivoltaic planners may need to treat the soil, Macknick says.

Is solar energy a good option for farmers?

Solar energy offers farmers the opportunity to harvest the sun twice--the same reason land is good for farming (flat, open areas), also makes it good for solar installations. The Solar Energy Technologies Office (SETO) is researching the opportunities and trade-offs of agrivoltaics.

What is agrivoltaics & how does it work?

Agrivoltaics is defined as agriculture, such as crop production, livestock grazing, and pollinator habitat, located underneath solar panels and/or between rows of solar panels. Solar energy offers farmers the opportunity to harvest the sun twice--the same reason land is good for farming (flat, open areas), also makes it good for solar installations.

Should farmers decide what they want before building a solar farm?

One thing is clear, Calderwood says: Farmers must decide what they want before they start building. "Do they want to put in [a solar] array and farm beneath it?"
