Should you buy a solar energy system?

A solar electric system provides an opportunity for anyone who is looking to reduce monthly utility bills and make a long-term, low-risk investment. Solar panels are viewed as upgrades, like a renovated kitchen or a finished basement, so purchasing a solar energy system will likely increase your home's value.

What are the benefits of solar energy?

Lower utility bills: By generating your own electricity, you can significantly reduce your monthly energy costs.

Environmental impact: Solar energy is clean and renewable, helping to reduce greenhouse gas emissions.

Energy independence: Solar panels can provide power during outages, improving your home's resilience.

Is solar power booming?

Solar power is booming. Over the past decade, solar energy capacity in the U.S. has grown by an average of 25% each year, hitting a new high in 2024, according to the Solar Energy Industries Association. Most residential solar systems are designed to supplement your home's energy needs.

Are solar panels right for your home?

While installing solar panels brings a host of benefits, it's not right for every home. Make sure to pay attention to the drawbacks as well before making a final decision. **Lower utility bills:** By generating your own electricity, you can significantly reduce your monthly energy costs.

How is solar energy used?

Solar power is used in two main ways: generating electricity (like with rooftop solar panels) or generating thermal energy (like with concentrated solar power plants). For most homeowners, solar panels that convert solar energy to electricity are the best use of solar energy because it allows them to save on electric bills.

Are solar panels good for the environment?

One of the primary environmental benefits of solar panels is their role in decreasing greenhouse gas emissions. By harnessing energy from the sun and converting it to usable energy for everyday life, solar panels reduce the need for traditional fossil fuels, which release harmful greenhouse gases like carbon dioxide into the atmosphere.
