

Photovoltaic combiner box grounding inspection

What are the mounting and grounding procedures for a PV module?

The PV module mounting and grounding procedures used should follow the instructions provided in the installation manuals for the racking system and the PV module. The mounting structure or racking system wind loading and snow loading requirements are met, and the array setbacks from the roof edge meet fire codes.

Do PV AC combiner boxes have a switch disconnecter?

PV AC combiner boxes have an AC switch disconnecter as an optional component. The AC voltage of the switch depends on the voltage of the associated PV string inverters. The switch disconnecter (according to the IEC 60947-3) has been selected to assure that it can switch the circuit at full load at the maximum operating temperature.

What is a combiner box?

The combiner boxes are installed to connect, gather, collect and protect the AC cable outputs of various string inverters. 1 output, depending on various plant designs. Input of this product ranges from 400 V to a maximum input voltage of 800 V per string inverter.

How do I choose the right combiner box?

Proper sizing: Ensure that the combiner box is appropriately sized to accommodate the number of PV strings in your system and can handle the maximum current and voltage ratings. Wire selection: Use high-quality and properly rated wires that can withstand the environmental conditions and carry the current without excessive voltage drop.

How do I install a combiner box?

Wall-mounted or column-mounted installations are recommended, ensuring the wall or column can support the combiner box's weight. Install the combiner box's support braces on the same horizontal plane to prevent long-term deformation. Use M17/304 stainless steel screws for secure wall-piece installation.

How to protect a combiner box from moisture?

Close all unused cable glands with blanking plugs to prevent moisture penetrating the combiner box. Aluminium conductors are only suitable for installation sites that are free from humidity or aggressive atmospheres. It is highly recommended to use bimetallic connectors.
