How do I estimate the number of photovoltaic panels needed?

Address of the home: The geographical location of the home is a key point for estimating the number of panels needed. With this data, we can make an estimate of the photovoltaic system you need for your home, calculating the average annual production, the average annual savings and the number of panels you need for your consumption.

Should you install a solar energy system on your roof?

When you install a solar energy system, you're getting more than just solar panels on your roof. Multiple pieces of equipment, such as racking, wiring, and inverters, must be installed so the solar panels can power your home. There are also a number of costs that ensure your system is installed correctly and that the solar company can operate.

How do I know if a photovoltaic system is needed?

Number of people in the household: The number of people living in the house where the photovoltaic system will be installed is essential to know the approximate consumption in your home. Address of the home: The geographical location of the home is a key point for estimating the number of panels needed.

Are low solar prices a sign of a Solar scam?

Extremely low solar prices can be a sign of a solar scam. Charging way below average isn't sustainable, and the solar company could go out of business before the 25-year lifespan of your system is up.

Should I install solar panels on my roof in Phoenix?

If you install a 12 kW solar panel system on your roof in Phoenix, you'll produce about 25 percent more electricity than if you installed the same system in Boston. That doesn't mean you have to live in Arizona for solar to be a good option for your home - solar is a smart investment wherever electricity rates are high.

What factors should be taken into consideration when installing solar panels?

The average number of hours of sunshine is also a variable to take into account, as it changes depending on the geographical area. Another of the variables to be able to carry out an installation of these characteristics is the power of the solar panels that we install and the energy consumption that we usually have in our home.
